

# A COMPARATIVE ANALYSIS OF THE STRUCTURE OF COMMERCIAL BANK CREDIT OPERATIONS IN NIGERIAN STATES: 1972-1975

## 1. INTRODUCTION

A large amount of information is available on commercial bank credit operations in Nigeria. Some studies have been done on the growth, sectoral and maturity distributions of commercial bank credit in the country as a whole.<sup>1</sup> On the other hand little or no study has been carried out to examine the banks' financing activities on a state comparative basis. While for instance, it is important to know the volume of credit in the economy and the distribution of such credit by economic sectors, it is also important to know the geographical spread and/or concentration of the credit. Also, the flood of requests from state governments for banking statistics in respect of their states is a further evidence of the need for a state-based analysis of commercial banks' credit operations.

The objective of this paper is, therefore to provide this analysis. It undertakes an analysis of the state distribution of commercial bank loans and advances from 1972 to 1975. The analysis is based on the former twelve-state structure, mainly because during the period covered by the study, the country was divided into twelve states. The year 1972 is chosen as a starting point because banking statistics on state basis were first available in that year.

The analysis in this paper is based on the statistical returns by the banks in respect of their operations in each of the states of the Federation. Individual state statistics must be interpreted with caution, since the states are not in watertight compartments. For instance, credit granted in one state could be used in one or more other states; companies that have branches in several states or that operate all over the country may obtain credit in one state (usually at the headquarters) to finance their operations in other states. Thus the statistics of loans and advances granted in each state do not necessarily give a complete picture of the amount of bank credit used in the state.

The paper is divided into four sections: Section 1 is the introduction; Section 2 deals with the state distribution of commercial banks' loans and advances; that is, it examines the distribution of such loans on state basis and on state/sectoral basis. In Section 3, intra-state distribution of the banks' loans is discussed. Here the focus is the comparative structure of bank credit in individual states. For instance, how are the total loans and advances in a state distributed among the economic sectors within the state, what is the maturity and security pattern, and how do these compare with the position in other states? Section 4 is the conclusion.

<sup>1</sup>For example "The growth of commercial Bank Activities," *Central Bank of Nigeria Economic and Financial Review*, Vol. 6 No. 1 June 1968; and "The Maturity and Security patterns of commercial bank loans and advances, 1963-68," *Central Bank of Nigeria Economic and Financial Review*, Vol. 7 No. 1 June 1969.

## 2. STATE DISTRIBUTION OF LOANS AND ADVANCES

### (i) Aggregate Loans and Advances

Commercial banks' loans and advances (outstanding) to the Nigerian economy rose from ₦598.1 million at the end of 1972 to ₦1,429.6 million on 31st December, 1975. This represents a growth of 139.0 per cent in the three year period, or an average annual rate of increase of 46.3 per cent.

Lagos State had the lion's share throughout the period. Its share was ₦320.6 million or 53.6 per cent of the total in 1972, and by 1975 it went up to ₦830.4 million or 58.1 per cent. Its share averaged 54.3 per cent during the three-year period (see Tables 1 and 2). The old Western State (now Ogun, Oyo and Ondo States)\* had the second largest, followed by Kano State, MidWest (Bendel) and East Central States (Anambra and Imo) in that order. The share of the Western State ranged between 11.3 per cent in 1972 and 7.6 per cent in 1975, and averaged 10.0 per cent for the period. The high degree of concentration of loan facilities in Lagos is clearly shown by the fact that the share of Lagos (54.3 per cent) is higher than that of the other states put together (45.7 per cent). The shares of Kano, MidWestern and East Central States averaged 8.8, 5.4 and 5.0 per cent, respectively. The smallest share went to Kwara State with an average of 0.8 per cent. Only three states had shares above the national average of 8.3 per cent. These were Lagos State (54.3 per cent), Western State (10.0 per cent), and Kano State (8.8 per cent).

### (ii) Sectoral Distribution

Looking at the state and sectoral distribution of bank credit, Lagos State got the lion's share in most of the sectors/sub-sectors (see Tables 3-5). Of the total loans and advances granted to manufacturing in the whole country, those granted in Lagos State accounted for an average of 66.5 per cent. This was followed by those in Kano State with 7.7 per cent, Western State 5.4 per cent, and Rivers 5.3 per cent. The smallest shares in manufacturing credit went to the following states: Kwara State and North Eastern State received an annual average of 0.1 per cent each, North West 0.6 per cent, South East 1.0 per cent, and Benue Plateau 2.5 per cent. On agricultural credit, the share of Lagos State averaged 39.9 per

\*With effect from February, 1976, seven additional states were carved out from some of the twelve existing states—bringing the total number of states in the Federation to 19, while some states were renamed as follows:

- Benue Plateau State was split into Benue and Plateau States.
- East Central State was split into Anambra and Imo States.
- North Eastern State was divided into Borno, Bauchi and Gongola States.
- North Western State was divided into Sokoto and Niger states.
- Western State became Oyo, Ogun and Ondo states.
- MidWest State was renamed Bendel State.
- North Central State and South Eastern States were renamed Kaduna and Cross Rivers States respectively.

**TABLE 1**  
**DISTRIBUTION OF COMMERCIAL BANKS' LOANS**  
**AND ADVANCES BY STATES—1972 TO 1975**

(N' thousand)

STATES**	1972	1973	1974	1975
Benue Plateau <sup>1</sup>	12,230	15,052	19,926	29,451
MidWest	32,417	39,829	52,671	67,296
West <sup>2</sup>	67,642	81,078	89,658	108,422
Lagos	320,560	389,411	464,789	830,395*
East Central <sup>3</sup>	25,422	34,225	50,792	72,198
North Central	17,575	25,645	43,143	69,526
North Western <sup>4</sup>	10,672	9,548	16,109	34,455
South Eastern	10,054*	12,510*	18,778*	20,032
North Eastern <sup>5</sup>	13,134	19,465	20,075	24,778
Kano	62,458	66,586	75,617	104,108*
Rivers	20,584*	25,336*	37,779*	61,591*
Kwara	5,340	6,165	7,002	7,334*
<b>TOTAL</b>	<b>598,088</b>	<b>724,850</b>	<b>896,339</b>	<b>1,429,586</b>

\*\*With effect from February, 1976, seven additional states were carved out from some of the twelve existing states—bringing the total number of states in the Federation to 19, while some states were re-named:

<sup>1</sup> Split into two states—Benue and Plateau

<sup>2</sup> This was split into Oyo, Ogun and Ondo States

<sup>3</sup> This became Anambra and Imo States

<sup>4</sup> This became Sokoto and Niger States

<sup>5</sup> Split into Borno, Bauchi, and Gongola States.

MidWest state was renamed Bendel State. North Central State and South Eastern States were renamed Kaduna and Cross Rivers States respectively.

\*These figures were estimated as some banks had not reported on their operations in these states when the figures were compiled.

cent annually in the four-year period, followed by Western State with 10.7 per cent, North Central (Kaduna) State 10.2, MidWest 7.3, South East (Cross River) State 7.2, and Kano 7.1 per cent. Each of the remaining states received between 2.8 and 3.4 per cent. It looks a bit surprising that Lagos State also had a lion's share in agricultural credit. It is generally believed that the main economic occupations in Lagos State are industrial and commercial activities and that farming is of little (if any) significance. The real fact is that certain types of agriculture are important in Lagos. These include large-scale livestock and poultry farming such as Oke-Afa and Mitchel farms; and in particular fishing. For instance in 1975 credit for fishing accounted for over 42 per cent of agricultural credit in the state. It is also important to note, as indicated earlier in this paper, that credit obtained in Lagos where most companies have their head offices might have been utilised in other parts of the country.

Again, of the total credit for imports and domestic trade, 63.9 per cent went to Lagos State, followed by Western State with 8.5 per cent, East Central State 8.1 and Kano State 6.7 per cent. The shares in credit for imports and domestic trade by North Western State, Kwara, Benue Plateau and North Central States were particularly low with 0.8, 1.2, 1.3 and 1.6 per cent respectively.

It was only in respect of credit granted for exports and to Governments that Lagos State did not occupy the first place. With regard to export credit, Western State got the largest

<b>TOTAL</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

share with 33.3 per cent followed by Kano State 19.9 and Bendel 10.8; Lagos State received 9.9 per cent.

### (iii) Factors that influenced State Distribution of Credit

A major factor that influenced the distribution of bank credit among the various states was the level of economic activity and development. Another factor which is closely related to the first was the distribution of banks among the states. The distribution of banks and bank branches reflects some-how the level of economic activity and demand for bank services in the various states. Since commercial banks are profit-oriented, a primary consideration before setting up a bank branch in a state, or locality, is the viability and profitability of such a branch. Such viability and profitability depend to a large extent on the level of economic activities and unsatisfied demand for bank services.

Table 2 shows each state's percentage share of the total outstanding loans and advances while Table 6 shows the distribution of bank branches by state between 1972 and 1975. Lagos State has the highest absolute number of bank branches for all the years, but its percentage share declined slightly from 22 per cent in 1972 to 21.5 per cent in 1975 averaging 21.5 per cent for the four years. It can be observed from Table 6 that all the states tend to maintain their relative percentage share of bank branches with only slight decreases or increases during this period. Western, East Central and MidWestern States came second, third and fourth respectively in their average shares of total bank branches in the country. The ranking of states by their share of loans outstanding displays about the same order as ranking them by their share of total bank branches. Lagos State maintained its lead throughout in its share of loans (as in the case of branches distribution) with an average of 54.3 per cent, and Western State also maintained a second position throughout in its share of loans (as in the case of branches distribution) with an average of 10 per cent. The East Central State, which was third with an average of 12.9 per cent in branches distribution, came fourth with an average of 5.4 per cent in distribution of total loans outstanding. Kano State, which came

eleventh in branches distribution with an average of 3.4 per cent, has become third in loans distribution with an average of 7.5 per cent (this is the only exception where there is a wide difference in the two categories of ranking). Kwara State was the last in the share of bank branches as well as in percentage share of outstanding loans. Apart from Kano State which moved from eleventh position in branches distribution to third in loans distribution, all other states tended to maintain about the same position in both the distribution of branches and loans outstanding. It can be said that there is a strong correlation between the distribution of bank branches among the various states and the states' relative share of total credit.

The level of deposits in each state is another very important variable that may have affected the credit distribution in the various states. Tables 8 and 9 show the distribution and growth in the levels of deposits among the states between 1972 and 1975 inclusive. Lagos State, as one would expect, consistently had the highest share of bank deposits during the period under study. Its average for the period was 42.7 per cent. There was no close rival. The Western State, which occupied the second position during this period had a share ranging between 12 and 14.7 per cent, averaging 13.7 for the four-year period. The third place was taken by the East Central State with its share ranging from 8.9 per cent to 10.9 per cent, averaging 9.9 per cent. South Eastern and Kwara States with 2.2 and 2.1 per cent respectively, received the lowest shares. North Western, and Benue Plateau got 2.5 and 2.7 per cent respectively.

One thing that is obvious from these tables is that Lagos State, Western State, East Central State, North Central and MidWestern States consistently occupied the first five places (in that order) in the distribution of total deposits, throughout the four years. Some states did make tremendous gains in their share of total bank deposits but few states actually experienced declining shares. For example, North Eastern State had only ₦16 million or 2 per cent of total deposits in 1972 (the least share in that year), in 1975 its share was ₦154.9 million or 5.6 per cent of total—the seventh largest share of deposits in that year. The North Western, Kwara and Benue Plateau all made some gains in their shares of total deposits. On the other hand, Rivers and South Eastern States had declining shares of total deposits during this period.

The rates of growth of deposits in the states shown on Table 9 indicate that North Eastern State had the fastest rate of growth. The level of deposit liability in this state grew at a compound rate of 115 per cent annually. The Benue Plateau, North Western and Kwara States also had rates of growth of over 70 and 80 per cent. All other states had rates of growth of between 45 and 63 per cent except Rivers and South Eastern that had rates of 26 and 28 per cent respectively.

#### (iv) Loan to Deposit Ratio

By relating the loans and advances outstanding in each state to the level of deposits in the state, some light will be shed on the extent to which the loans in that state were derived from deposits acquired within the state and will also throw some light on the extent to which the level of deposit

obtained in a state was a constraining factors to the amount of loans granted in the state. It will also be possible to see whether any state had loans and advances in excess of its level of deposits.

The loan to deposit ratio situation in each state is presented in Table 10. The highest loan to deposit ratio was recorded in Kano State with an annual average of 1.06, Lagos and Rivers States came second and third with annual average of 0.82 and 0.74 respectively.

Kwara State, which had the lowest share of total loans outstanding also had the lowest loan to deposit ratio. This implies that it was not a high percentage of loans relative to deposit in Kwara State that constrained expansion of credit to make her have the lowest level of credit relative to other states. That is the relatively low level of credit in that state could not be said to be due to lack of adequate deposits or loanable funds. In fact, Kano State with the third largest share of total loans outstanding, had a loan to deposit ratio of over one (1.06) implying that the loans made there were more than the commercial banks' total deposits collected in the state; the difference might have come from other states. This is not surprising since many banks in this country operate on nationwide basis. Lagos State had an annual average loan to deposit ratio of 0.82. MidWestern, North Eastern, Benue Plateau, and Rivers States had annual average loan to deposit ratios of between 54 and 74 per cent. In all the states, except Rivers and North Central States, the loan to deposit ratios were at their lowest point in 1975. In Benue Plateau and Kwara States, the magnitude of the decline was quite high—in Benue Plateau State the ratio declined from 0.60 in 1972 to 0.26 in 1975, while in Kwara the decline was from 0.33 in 1972 to 0.09 in 1975. The relative low levels of loan to deposit ratios in most states by 1975 reflected the problem of excess liquidity of commercial banks during the period. From the foregoing analysis it is obvious that for those states that had low shares of loans, lack of loanable funds from banks was probably not the cause. The main factor that could have contributed to the wide disparities in the various states' shares of bank credit was, as indicated above, the level of economic development in each state. Relatively more industrial and commercial states like Lagos, Kano, Western, North Central, East Central, Rivers and Mid-Western States had relatively greater shares of the banks' loans than the other states that were relatively less developed.

### 3. INTRA-STATE DISTRIBUTION OF BANK LOANS

#### (i) Sectoral Credit Distribution

With regard to sectoral distribution of the banks' loans and advances, within individual states, it would be helpful to state first Central Bank Credit Guidelines under which the commercial banks conducted their credit operations. Since July 1969, the Central Bank had prescribed guidelines for the banks with regard to permissible increase in credit and the sectoral distribution of such credit. The objective was to control credit expansion and to ensure that the bulk of any increase in credit went to the preferred sectors (production

and services) of the economy. During the period covered by this paper, 1972–1975, restriction on credit expansion was dropped, but the guidelines stipulated desired sectoral distribution of bank loans and advances as follows:

- A. Preferred sectors (minimum) . . . . . 56 per cent
  - (i) Production . . . . . 45 per cent
  - (ii) Services . . . . . 11 per cent
- B. Less preferred sectors (maximum) . . . . . 44 per cent
  - (i) General commerce . . . . . 32 per cent
  - (ii) "Others" . . . . . 12 per cent

In 1975 prescribed minimum allocation to the preferred sectors was raised to 58 per cent. Apart from this and a few other adjustments mostly in favour of the preferred sectors, these proportions were retained in the guidelines for the period under consideration.<sup>1</sup>

The banks were not expected to meet these sectoral credit allocations requirement on the basis of individual states, but on the basis of the whole economy. However, it would be interesting to find out how the banks allocated credit to the various sectors in individual states. During the period, 1972–1975 it was only in three states that the banks met, on the average, the minimum requirement on credit allocation to the preferred sectors. The States were Rivers, North Central and South Eastern, where the banks allocated an average of 67.8, 57.6 and 56.4 per cent respectively of their total loans and advances to the preferred sectors. (See Table 7.) In Benue Plateau, allocation to these sectors was 55.6 per cent which was below the prescribed minimum by a narrow margin. Allocation in Lagos State averaged 50 per cent to the preferred sectors and 50 per cent to the less preferred sectors. The preferred sectors in MidWestern State received an average of 47.4 per cent during the four year period. In this regard, the performance of the banks was poorest in Kwara State where only 20.0 per cent of their total loans went to the preferred sectors. This means that the banks granted the bulk (80.0 per cent) of their credit in the state to the less preferred sectors (General Commerce and 'Others').

Allocation to agriculture was highest in South Eastern State. Of the total loans granted in that state during the period an average of 11.8 per cent went to agriculture. This was followed by North Central, Kwara, and Benue Plateau States where 7.2, 6.7 and 4.6 per cent respectively of the loans made in the states went to agriculture. It was only in these states that on the average credit allocation to agriculture met the credit guidelines stipulation for agriculture which was a minimum of 4 per cent in 1972–1974 and 6 per cent in 1975. Allocation to agriculture was poorest in East Central and Lagos States where the sector received only 1.6 and 2.0 per cent respectively. In Rivers, Kano, West and MidWestern States agriculture was allocated 2.8, 3.0, 3.1 and 3.9 per cent respectively. It is remarkable that while agricultural credit in Lagos State constitute an insignificant proportion of total credit in the state, yet on inter-state comparison, Lagos State has the highest share of total agricultural credit in the economy. This further confirms the unrivalled

position the state occupies in the distribution of bank credit in the economy.

Manufacturing received 38.7 per cent of the total loans granted in Rivers State during the period under review. This was followed by Benue Plateau and Lagos States where 30.7 and 29.6 per cent respectively were allocated to manufacturing. With the exception of these three states, credit allocations to manufacturing in the other states were far below the prescribed minimum of 30 per cent. Allocation in Kano was 26.1 per cent, North Central 21.6, and East Central 17.5, MidWestern State 18.0 per cent. The lowest allocation to manufacturing was in North Eastern State 1.7 per cent, Kwara, 2.0 and North Western State 9.0 per cent.

Although the banks' allocation of credit to the preferred sectors fell short of the guidelines minimum requirement in most of the states, there was a clear trend whereby increasing proportions of the banks' loan went to these sectors in nearly all the states, the only exceptions being Kwara and Rivers. For instance, of the total credit outstanding, in North Eastern State in December 1972, only 10.9 per cent was for the preferred sectors. But by the end of 1975 the proportion had risen to 37.9 per cent. Similarly, allocation to the preferred sectors in the Western State rose from 22.3 per cent in 1972 to 43.0 per cent in 1975, while during the same period such allocations in North Western grew from 26.7 to 35.0 per cent, in East Central from 32.2 to 54.1 per cent, and MidWestern State from 37.1 to 56.7 per cent. This trend, no doubt, reflects increasing compliance with the credit guidelines of the Central Bank.

#### (ii) Loans to Indigenous Borrowers in Individual States

Indigenous borrowers received the bulk of the loans and advances granted in each state, with the exception of Lagos and Kano States, during the period under review. In eight of the twelve states the share of indigenous borrowers in total loans was on the average above 80 per cent (see Table 12). With the exception of Lagos, indigenous borrowers received in each state over 60 per cent of the total loans granted in the states. In Kwara State, nearly all the loans granted in the states went to indigenous borrowers. They received between 99.3 and 99.9 per cent of the total and averaged 99.6 per cent in the four-year period. This means that expatriates and expatriate businesses received an average of only 0.4 per cent of the total bank loans granted in the state.

In South Eastern, North Eastern, Western, North Western and East Central States indigenous borrowers received on average, 97.2, 96.2, 94.7, 94.6 and 92.5 per cent respectively of the total bank loans in the states during the period. Such borrowers received 87.7 per cent in MidWestern State, 83.4 per cent in River, and 76.4 per cent in North Central States. The share of indigenous borrowers in bank loans and advances was lowest in Lagos State followed by Kano State. Their share in Lagos State averaged 52.4 per cent in the four-year period (1972–1975). In two of the four years, their share was below 50 per cent. Thus in Lagos State expatriate and indigenous borrowers received nearly equal proportions of bank loans, with the latter having a little edge over the former. After Lagos, Kano recorded the smallest share of

<sup>1</sup>For details of the prescriptions see CBN Monetary Policy Circulars for 1972/73–1975/76.

indigenous borrowers in intra-state bank loans. Their share averaged 64.4 per cent during the period. While in most of the states indigenous borrowers received over 80 per cent of the intra-state loans, for the whole economy, the share of these borrowers averaged only 66.1 per cent. The share of indigenous borrowers in loans to the whole economy again reflects the weight and importance of Lagos in the distribution of bank credit.

If we assume that the share of indigenous borrowers somehow reflects the degree of relative importance of indigenous businesses vis-a-vis expatriate ones in the economy of a state, and vice-versa, it can be said that there was virtually no foreign businesses operating in Kwara State, or in other words, that virtually all the business activities in that state were in the hands of indigenous people. To some extent the assumption is valid. For instance, while in most of the states loans to indigenous borrowers accounted for well over 80 per cent of the banks' total loans and advances within the states, in Lagos State where foreign businesses are concentrated, loans to indigenous borrowers were below 50 per cent in two of the four years examined, and averaged only 52.4 per cent for the whole period. Also, in Kano State, another place where foreign business accounted for a large proportion of business activities, foreign businesses got about 35.6 per cent of the total loans granted in the state while indigenous borrowers received 64.4 per cent.

However, there are two main reasons why the share of expatriate or indigenous businesses in bank credit in a state would not be an accurate measure of the shares of the two groups in the business activities of the state. One is that a company which has country-wide operations could obtain bank credit in one state, and use the funds to finance operations in other states of the Federation. The other reason is that not all companies, especially expatriate companies, operating in a state may depend on bank credit for their operations. Some depend largely or wholly on internal sources for their funds.

The influence of Central Bank's guideline on the flow of credit to indigenous persons and business must be mentioned. When the Central Bank observed in 1970 that certain commercial banks (mostly the expatriate ones) were not giving due attention to indigenous borrowers, it directed that every bank should ensure that not less than 35 per cent of its total loans and advances was made available to this category of borrowers. The minimum ratio was raised to 40 per cent in April 1972, to 50 per cent in 1977, and 60 per cent in 1978. Indigenous persons had always, even before the credit guideline, received the bulk, usually above 80 per cent, of indigenous banks' loans and advances. So that the stipulation was really meant to influence or change expatriate banks' pattern of loan distribution between expatriate and indigenous borrowers. The share of indigenous persons in the loans and advances of expatriate banks in the whole economy was only 21.3 per cent in 1970. The ratio rose to 39.5 per cent in 1974 and stood at 35.7 per cent in 1975.

### (iii) Maturity of Loans

The maturity of the banks loans and advances followed the same pattern in the various states. Loans maturing within

6 months constituted the bulk of the total loans in each state—accounting on the average for proportions ranging from 58.3 per cent in North Western State to 84.5 per cent in South Eastern State compared with the national average of 78.5 per cent (see Table 14). In nine out of the former twelve states loans maturing within six months accounted for over 70 per cent of the total. The concentration on loans of such maturity was highest in South Eastern, Lagos, Rivers, East Central and Western States with 84.5, 81.1, 79.7, 79.6 and 79.2 per cent respectively. Loans maturing between 1 and 5 years accounted for 24.6 per cent in North Eastern State which was higher than in any other state. It was followed by Benue Plateau and North Western States where loans of such maturity accounted for 19.2 per cent of total each. The lowest was recorded in Western State (6.8 per cent) and South Eastern State (8.2 per cent). Loans of a maturity of over five years were insignificant in all the states. Such loans accounted for less than 2.0 per cent of total bank loans in seven of the twelve states. In North Central State loans maturing over five years accounted for 4.2 per cent of the loans granted in the states. They accounted for 3.2, 2.9 and 2.5 per cent in North Western, South Eastern, and Mid-Western States respectively. The ratios for Benue Plateau, East Central State, Kwara, Lagos, North Eastern and Rivers States were below the national average of 1.4 per cent.

### (iv) Loan Security

The form of reporting by the commercial banks with regard to their loans security does not permit detailed analysis. For instance, loans secured by plant, equipment, and real estate are lumped together in the reports; and also loans secured by life insurance policy and time and savings deposits are put together whereas it would have been much better for purpose of analysis if these items especially real estate, life insurance policy, plant and equipment had been reported separately.<sup>1</sup> Thus because of this statistical constraint, only a broad analysis is presented below.

The most popular assets used as loan collaterals in most of the states during 1972-1975 were real estate, and plant and equipment. Loans secured against these assets formed on the average 56.5 per cent of all loans granted in Benue Plateau, while in Kano, MidWestern, and Western States loans so secured accounted for 45.0, 39.6 and 39.2 per cent respectively of loans granted in the states. They were also popularly used in East Central and Kwara States where 30.4 per cent of loans granted in each of the states was secured by these collaterals (see Tables 15 and 16). On the average, 29.6 per cent of all loans and advances made in the whole country during the period under review was secured against real estate, and plant and equipment. The next most popular assets (or group of assets) used to secure loans in most of the states were securities and other financial assets. These were used to secure 37.3 per cent of loans granted in Kwara State. In other states, though they were next in importance to real estate and equipment, they were used by far to a lesser extent. In South Eastern, Rivers, Benue Plateau, North Eastern,

<sup>1</sup>However, these defects have been corrected as from 1976 when the banks started reporting these items separately on a revised format.

North Western, and Kano States these assets/collaterals accounted for 24.1, 20.4, 19.3, 17.8, 17.5 and 16.6 per cent respectively.

Loans secured by unspecified means constituted surprisingly high proportions of the loans in Rivers State (43.4 per cent), North Central State (34.5 per cent), North Western State (30.0 per cent), and Lagos State (28.5 per cent). The ratio of unsecured loans was highest in Lagos State where an average of 28.5 per cent of the loans granted in 1972-1975 was unsecured. This is followed by North Western and North Eastern States with 21.4 and 21.0 per cent respectively. Kwara and Benue Plateau States recorded the lowest unsecured loans of 7.6 and 8.6 per cent respectively. For the whole country, unsecured loans averaged 21.9 per cent.

#### 4. CONCLUSION

This paper has surveyed on a comparative basis the credit operations of commercial banks in the former twelve states of the Federation. It has analysed both on a state basis and within each state the distribution of banks' credit and other financial aggregates; and has shown the wide disparities in the distribution of banking facilities—bank branches, loans, deposits, etc. among the various states. In most cases, the disparity is a reflection of differences in the levels of industrialisation and economic development among the states. While

there is nothing abnormal or extra-ordinary in this development, it reveals the need for policy measures to promote the provision of banking facilities in those areas where they are most lacking. While it is true that banking usually follows business activities, the reverse movement is also possible. That is, the existence of banking in a locality can be a prelude and stimulus to business activity in the area. Thus the current rural banking policy which is designed to induce banks to establish branches in the rural and less developed parts of the country is certainly a step in the right direction.

The paper also reveals some similarities in the banking situations in various states. This is the case with regard to maturity pattern of loans, and in the distribution of loans as between expatriate and indigenous borrowers.

The analysis in the paper has been presented on the basis of twelve, rather than nineteen states because during the period covered by the paper the country was a federation of twelve states. We hope that in the future similar papers will be prepared on the basis of nineteen states. In fact one (covering 1976-1977) is currently being prepared along that line.
